

Port Hedland, WA

Project Description

The Great Northern Highway Realignment Project involved realigning an 8km section of a major road around the Wedgefield industrial area in Port Hedland in Western Australia's remote Pilbara region. The project scope also included a major road interchange, a new road bridge over BHP's iron ore rail line, a level bridge at South Creek, and new intersections. JAGCON Group provided short-term support during the critical start-up phase, including setting up for key project delivery areas and awarding subcontracts. JAGCON Group revised the program and planning to avoid a second wet season, which saw the project finish six months early.

JAGCON Group Role

JAGCON Group worked with Macmahon Contractors on this project providing project management services, expert advice on constructability & senior engineers throughout the lifecycle of the project.

Key Construction Works:

- Earthworks (Surface)
- Surface Roadworks & Drainage
