

Project Description

Sydney Gateway is the "missing link" that connects Sydney's motorway network to Sydney Airport. The project consists of over 5km of new road including 19 new bridge structures, a new elevated flyover to the Domestic Terminals, and over 3km of new shared cycle and pedestrian pathway. The project was delivered successfully despite facing significant complexities and constraints in its interfaces with live traffic and airspace.

Clients

John Holland Seymour Whyte Joint Venture

JAGCON Group Role

JAGCON Group worked with the John Holland Seymour Whyte Joint Venture providing support in managing work permits and interface agreements with key stakeholders including Sydney Airport and the Airport Building Controller.
